

Acquiring Cameras

You've just taken an innovative step forward with CompScience Workers' Compensation insurance. By leveraging cutting-edge technology, including video analytics, we help you uncover risks, improve safety, and reduce costs—all tailored to your unique operations.

If you don't have cameras installed yet, no worries—we're here to make the process seamless and straightforward! With our expert guidance, you'll be up and running in no time, ready to unlock the full potential of our risk assessment and prevention capabilities.

CompScience

Let's get started:

Build a Plan

Schedule a virtual walkthrough with us to suggest the best locations, field of view and other criteria for your cameras to best identify risks in your workplace.

Find a camera vendor

- If you already have a preferred vendor, great! We can set up a quick call with you to discuss technical details to ensure it will be compatible.
- If you don't, we recommend our partner Verkada (https://www.verkada.com/security-cameras/)
- If you are interested in learning more about Verkada, please let us know and we can connect you with a local distributor

Purchase and Install

Once you acquire cameras, you will typically work with your distributor to install them.

Compscience Support engineers are available at any time if there are questions during the installation process

Record and Upload

Once you have begun recording, we typically look for about 150 hours of video footage. Complete our Video Compatibility Check form so we can share recommendations for your upload.

Our Support engineers will set up a call to assist as needed.

Once your video is uploaded, we will begin assessing your risks and create your personalized risk report with our findings and actionable recommendations to improve your workplace.
